# Introduction

---

First of all, we would like to thank you for purchasing **Gags WordPress theme**. We hope you like the theme the way we like it.

Please spend a moment of your time to confirm your purchase on <http://www.themewarrior.com/purchase-confirmation/> so we can send you updates when a new theme or an update is released.

Please note that we only provide support via ThemeForest, we do not offer support via IMs or phone.

Have fun with the theme!

Best regards,

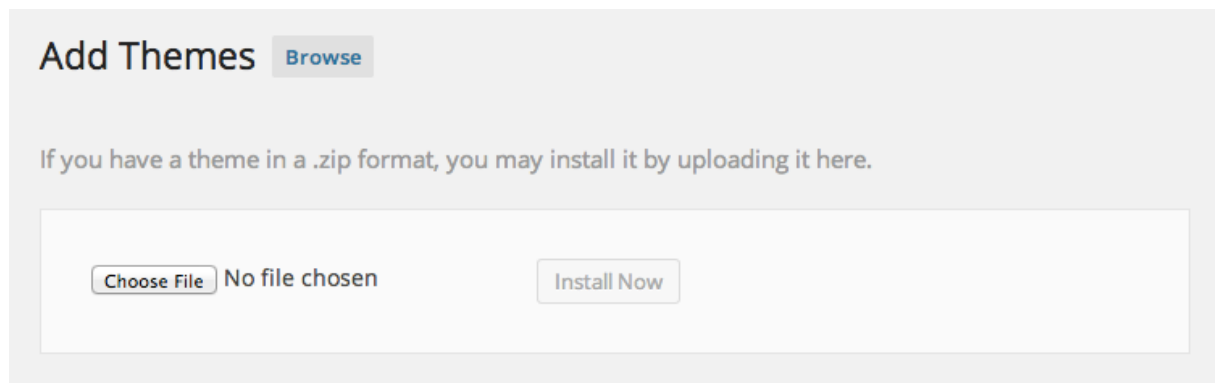

**ThemeWarrior Team**

# Theme Installation

---

This installation guidelines will help set your themes successfully.

To install the theme, login to your 'wp-admin' section using your admin credential. Click on Appearance > Themes > Add New > Upload Theme.

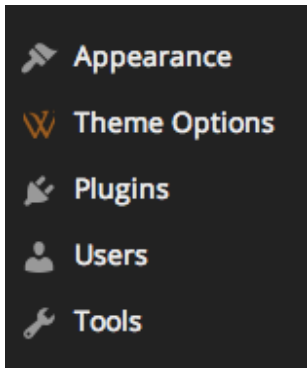

Once you're on Add Themes page, click on Choose File to browse the .zip file containing the theme file. We usually name the file: theme-name.zip. Once the file is selected hit "Install Now" button.

**Note:** Before installing make sure you server setting allow uploading file larger than 4 MB.

# Configuring the Theme

---

After you install our theme you just purchased, login to wp-admin <http://www.yoursite.com/wp-admin> using your login credential.

If you've successfully logged in click on ***Appearance*** > ***Themes*** menu and then activate our theme. You'll then see a new sub menu called **Theme Options** show up on the left hand side. The new menu you've just clicked will guide you to our theme options panel that will help you manage the theme.

There are several options available in theme options panel, you can read the description of each options on that page.

## Plugins

---

This theme depends heavily on several plugins:

- **Gags plugin (required)**
- **ReduxFramework (required)**
- **Video Thumbnails (required)**
- ZillaShortcodes (optional)
- WordPress SEO by Yoast (optional)
- Yet Another Related Posts / YARPP (optional)
- WP Page-Navi (optional)

Themes **51**

Search installed themes...

This theme requires the following plugins: [Contact Form 7](#), [Instagram Feed](#), [MailChimp](#), [WP Page-Navi](#) and [ZillaShortcodes](#).

[Begin installing plugins](#) | [Dismiss this notice](#)

After theme is installed and activated, you'll see a notification message inside WordPress Dashboard that informs you to install the above plugins.

Click on "Begin installing plugins" to start installing the necessary plugins.

Select all the plugins then click on the "Bulk Action" select box and choose "Install" from the drop down then hit the "Apply" button. The installation process will begin automatically and it will notify you when the installation process is completed.

## Install Required Plugins

| <input type="checkbox"/> | Plugin                          | Source               | Type     | Status        |
|--------------------------|---------------------------------|----------------------|----------|---------------|
| <input type="checkbox"/> | <a href="#">Contact Form 7</a>  | WordPress Repository | Required | Not Installed |
| <input type="checkbox"/> | <a href="#">Instagram Feed</a>  | WordPress Repository | Required | Not Installed |
| <input type="checkbox"/> | <a href="#">MailChimp</a>       | WordPress Repository | Required | Not Installed |
| <input type="checkbox"/> | <a href="#">WP Page-Navi</a>    | WordPress Repository | Required | Not Installed |

## Importing XML Demo Data

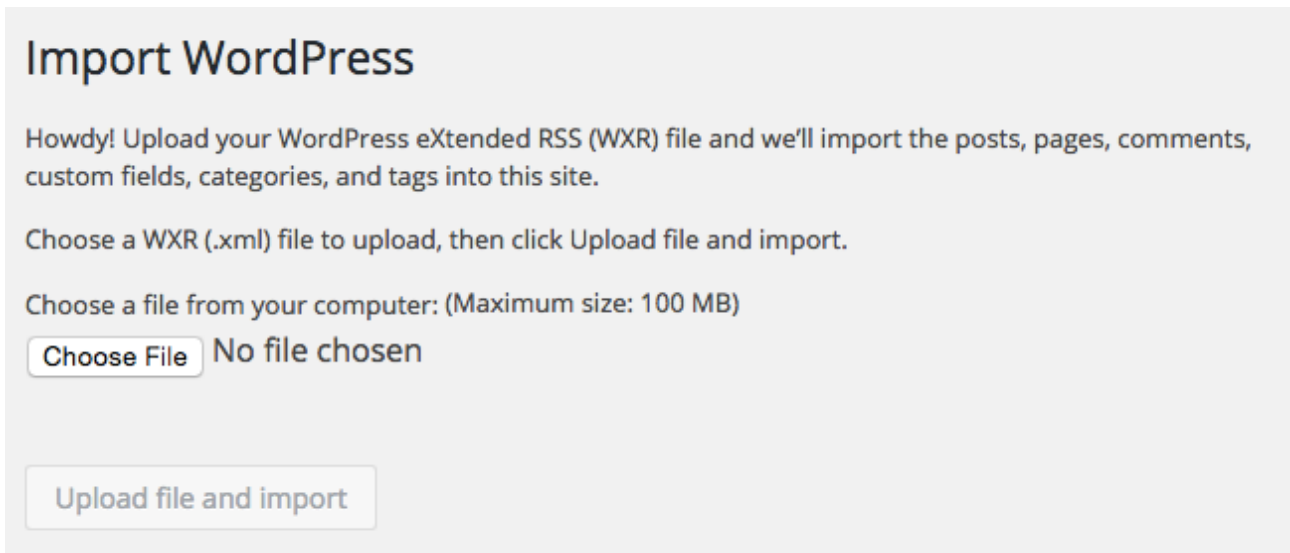

---

*Before proceeding, make sure Gags and Redux Framework plugins are installed and activated.*

Inside the theme package zip file there's a folder called "Import Data", inside the folder there's a file called demo-data.xml, this is the file that we are going to use to import all demo data to your site.

Go to WordPress Dashboard (wp-admin), click on Tools > Import, then click on "WordPress".

If you haven't installed WordPress Importer plugin yet, it will ask you to install it first.

**Import WordPress**

Howdy! Upload your WordPress eXtended RSS (WXR) file and we'll import the posts, pages, comments, custom fields, categories, and tags into this site.

Choose a WXR (.xml) file to upload, then click Upload file and import.

Choose a file from your computer: (Maximum size: 100 MB)

No file chosen

From the Import WordPress page click "Choose File" then browse through your hard drives and then choose demo-data.xml file that we mentioned earlier. Then click on "Upload file and import".

On the next page you will be asked to assign the content to another author that exists in your site. Just choose one of the authors from the drop down then click submit.

Put a check mark on “Download and import file attachments” if you wish to download the images and files used in our demo site. You will need an stable internet connection to do this.

Hit the “Submit” button to start importing. The import process should start automatically and will notify you when the process is completed.

# Gags Plugin Setting

---

Before proceeding, make sure Gags and Redux Framework plugins are installed and activated.

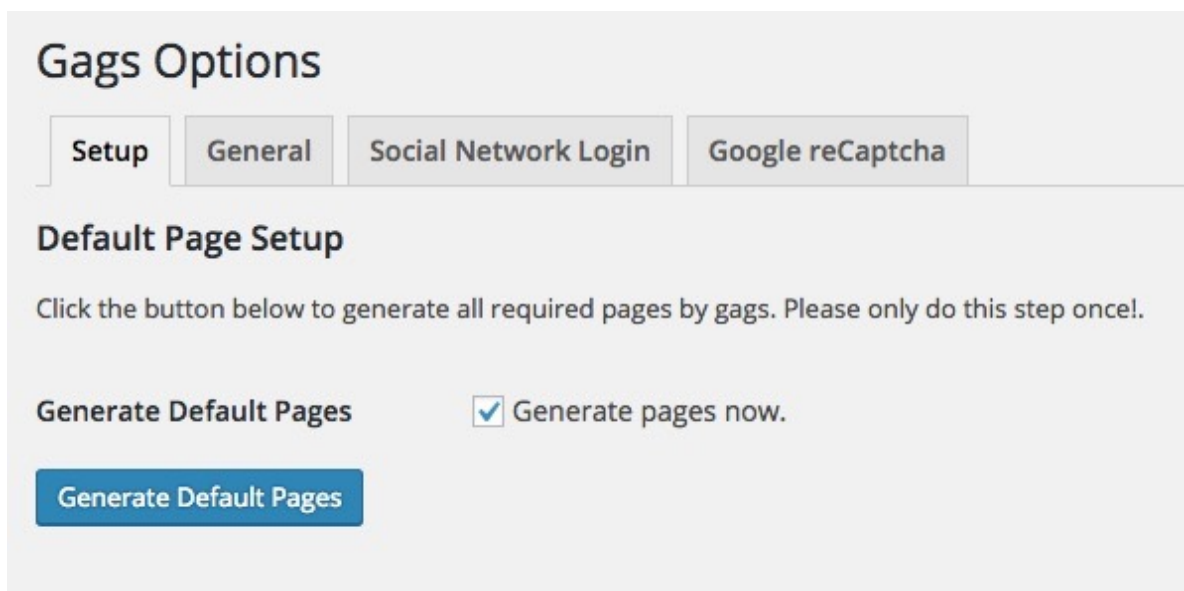

From the plugin settings page, you'll see several tabs that consist lots of options to manage the plugin behaviour.

## Setup

---

The Setup tab will help you create the required pages, simply navigate to Settings > Gags page.

From the 'Setup' tab you'll see Generate Default Pages option, put a checkmark on it and hit the Generate Default Pages button to start generating the pages.

The screenshot shows the 'Gags Options' settings page. At the top, there are four tabs: 'Setup', 'General', 'Social Network Login', and 'Google reCaptcha'. The 'Setup' tab is currently selected. Below the tabs, the section is titled 'Default Page Setup'. A message reads: 'Click the button below to generate all required pages by gags. Please only do this step once!'. Underneath, there is a label 'Generate Default Pages' followed by a checked checkbox and the text 'Generate pages now.'. At the bottom of this section is a blue button labeled 'Generate Default Pages'.

Once you're done, go to Pages > All Pages to all pages in your WordPress installation and if the default pages creation was successful, you'll see these default pages on the list.

The default pages should be:

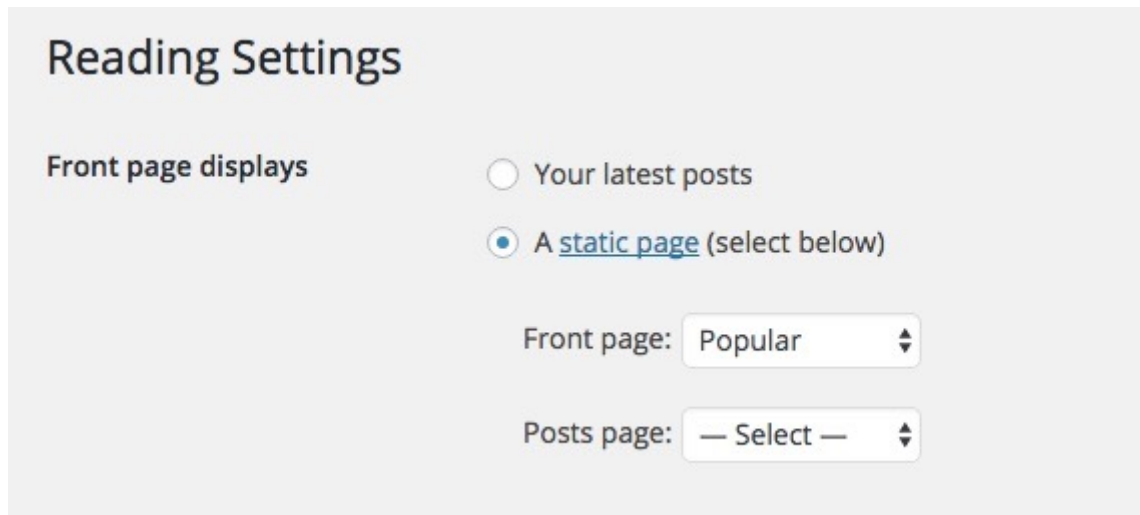

| Pages <a href="#">Add New</a>  |            |   |                      |
|--|------------|---|----------------------|
| All (11)   Mine (9)   Published (11)                                   |            |   |                      |
| <div>Bulk Actions ▾ Apply All dates ▾ Filter</div> <div>11 items</div> |            |   |                      |
| <input type="checkbox"/> Title   | Author     |   | Date                 |
| <input type="checkbox"/> <a href="#">Dashboard</a>                     | Andra Yogi | — | Published 2016/03/10 |
| <input type="checkbox"/> <a href="#">Edit Password</a>                 | Andra Yogi | — | Published 2016/03/10 |
| <input type="checkbox"/> <a href="#">Edit Profile</a>                  | Andra Yogi | — | Published 2016/03/10 |
| <input type="checkbox"/> <a href="#">Fullwidth</a>                     | Ashiddiq i | — | Published 2016/03/03 |
| <input type="checkbox"/> <a href="#">Home — Front Page</a>             | Ashiddiq i | — | Published 2016/03/04 |

- Dashboard
- Edit Password
- Edit Profile
- Lost Password
- Popular Gags
- Recent Gags
- Trending Gags (this one can be use as your homepage)
- Submit Gag

## Setup Homepage

---

To setup the homepage simply go to Settings > Reading from your wp-admin section. From the 'Front page displays' choose 'A static page (select below)' then from the Front page dropdown select Popular Gags page as your homepage.

The screenshot shows the 'Reading Settings' section in the WordPress admin interface. Under the 'Front page displays' heading, there are two radio button options. The first is 'Your latest posts', which is unselected. The second is 'A [static page](#) (select below)', which is selected with a blue dot. Below these options are two dropdown menus. The 'Front page:' dropdown is set to 'Popular'. The 'Posts page:' dropdown is set to '— Select —'.

# Theme Options

This chapter will explain on how to configure the theme options in our theme. Theme Options menu can be found in the left hand side menu in WordPress Dashboard or in the WordPress admin bar.

After making any changes to the theme options don't forget to save the changes.

## General

---

In General tab you'll see an option to add Tracking Code and several post related settings.

## Typography

---

Typography options enables you to control the theme's typography. You can change the font, font size and font color.

## Colors

---

Colors options enables you to control the theme's colours and background for almost every elements.

## Advertisement

---

Options to setup ads on pre-defined ad locations in the theme.

## Import & Export

---

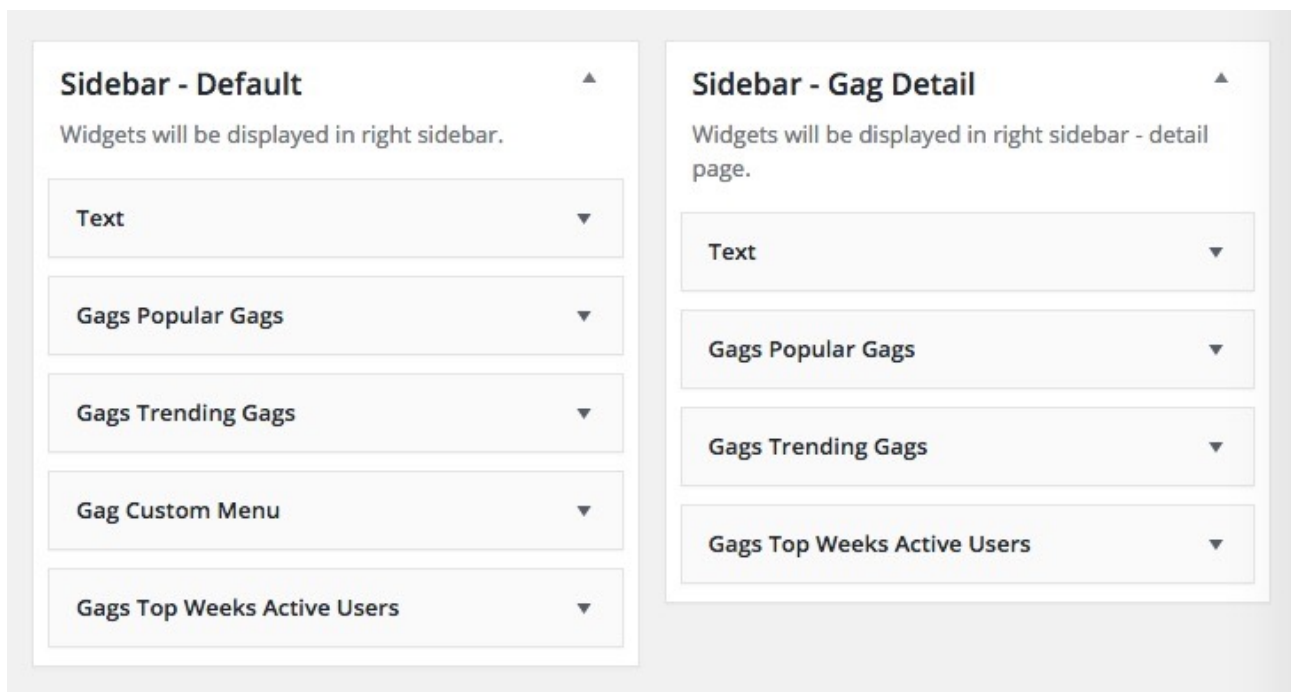

This tab is useful if you need to export the theme options settings and then import it into another site using the same theme.

# Widgets Settings

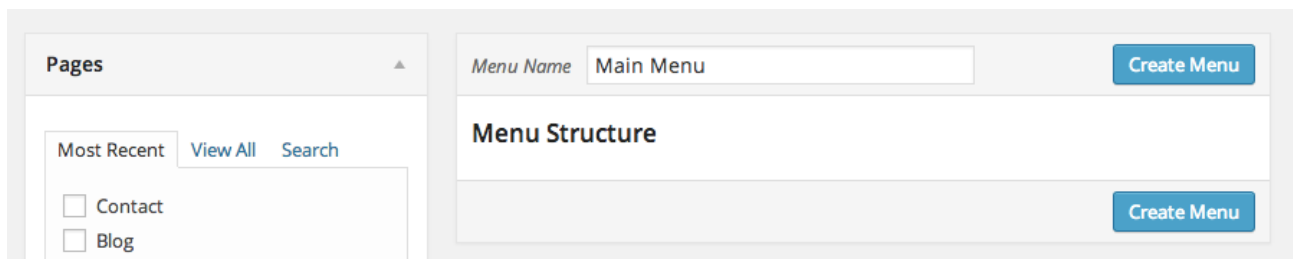

---

Go to Appearance > Widgets from the left hand side menu, there are several WordPress default widgets and custom widgets to choose from. By default there are 2 (two) widget areas available, which are the Sidebar and Sidebar - Story Detail area.

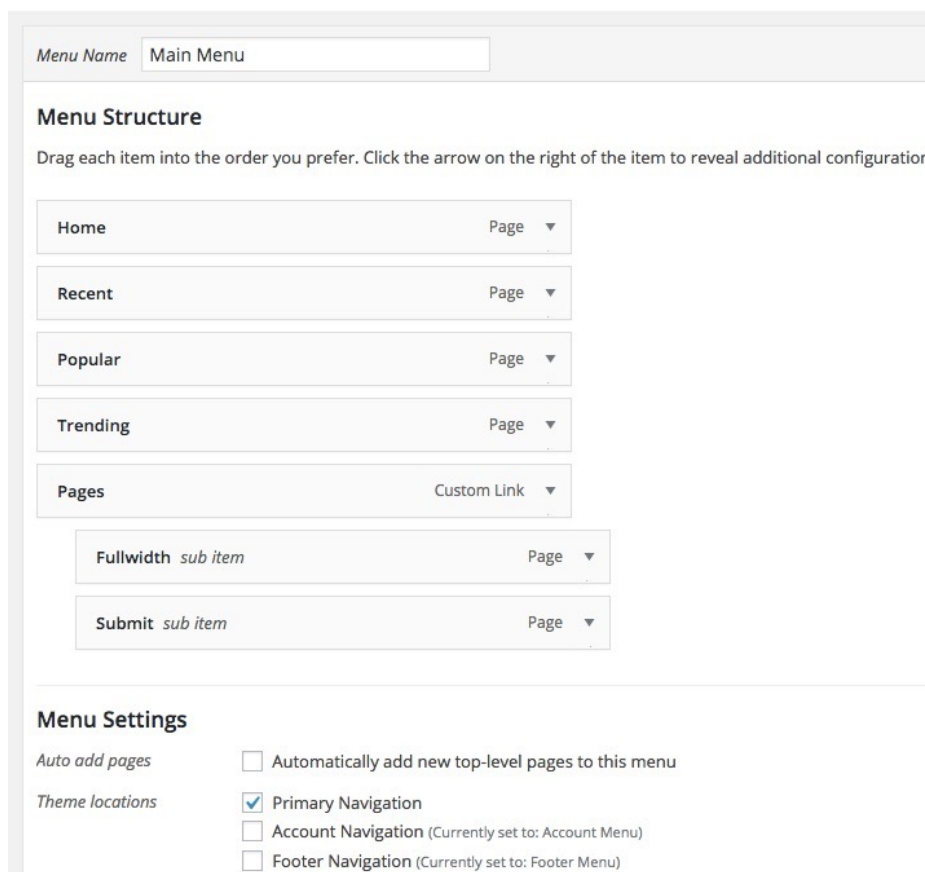

# Creating Menus

To create the menu for your site, simply to to *Appearance > Menus*. If you don't have any menu yet, create one the name it as you like then hit the "Create Menu" button.

Once the menu is created you can start adding menus from the left hand side. If you're done adding menus, put a check mark on "Main Menu Left" under **Theme locations** option to place the menu on the left side and "Main Menu Right" to place the menu to the right side.

Remember, you need to have a set of menus. So make sure you create 3 (three) menus and assign them to Primary Navigation, Footer Navigation and Account Navigation.

In Account Navigation you need to place these menus so that users are able to navigate to your user account pages.

**Note:** Logout menu is added automatically by the theme.

# Setting Up Related Gags

Before continuing, make sure you have install and activate **Yet Another Related Posts Plugin (YARPP)** plugin.

Login to your wp-admin section, then navigate to Settings > YARPP. In the YARPP setting page you'll see bunch of options to control how related posts work.

In the "Display options for your website" box, do the following:

1. Uncheck all checkbox under "Automatically display related content from YARPP Basic on:".
2. Choose "Custom" on the display option.
3. Select `yarpp-template-related-images.php` from Template file option.

Refer to the screenshot below for more detail.

The screenshot shows the YARPP settings page with several annotations:

- Display options for your website**: A green checkmark icon and a button labeled "Uncheck this" point to the "Automatically display related content from YARPP Basic on:" section, where the checkboxes for "Posts", "Pages", and "Media" are unchecked.
- Maximum number of related posts**: A green checkmark icon and a button labeled "Select 'Custom'" point to the "Maximum number of related posts:" field, which is set to "4".
- Template file**: A green checkmark icon and a button labeled "Select this template" point to the "Template file:" dropdown menu, which is set to "yarpp-template-related-images.php".

Other visible options include:

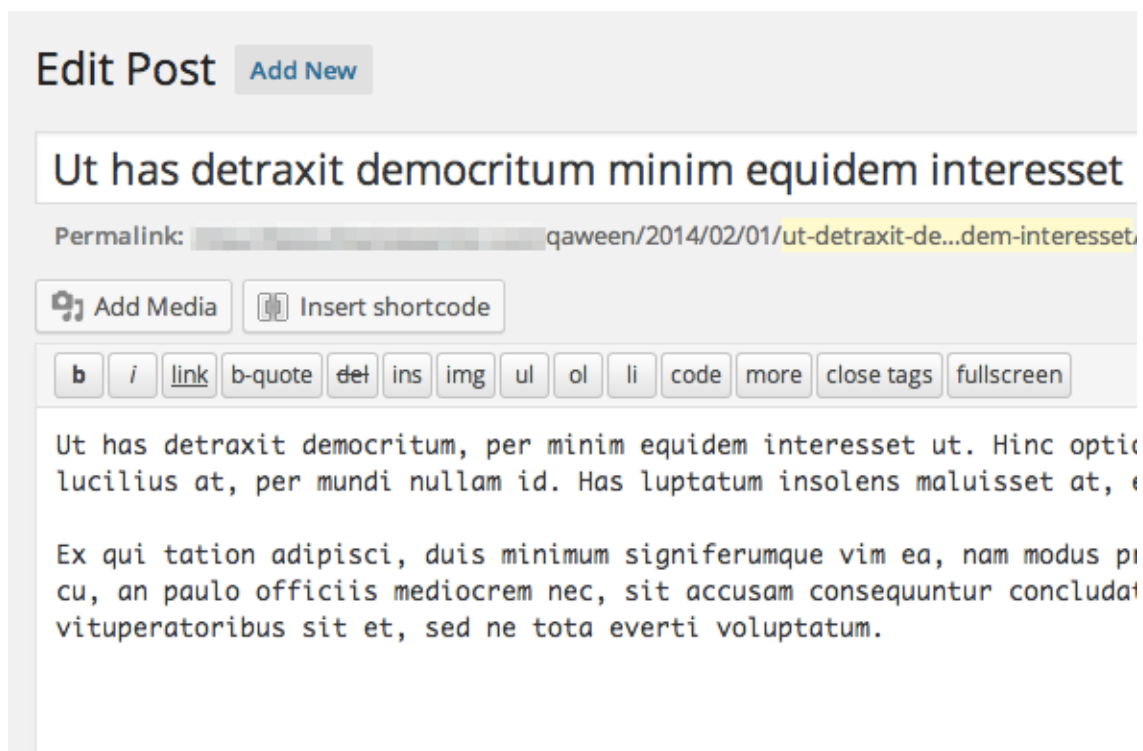

- ☐ Also display in archives
- Display options: List, Thumbnails, Custom (selected)
- Order results: score (high relevance to low)
- ☐ Help promote Yet Another Related Posts Plugin?

# Shortcodes Manual

---

For the shortcodes, we use ZillaShortcodes plugin created by ThemeZilla <http://www.themezilla.com/plugins/zillashortcodes/>.

To add shortcode on any post or page simply go to the Add / Edit post screen then click on “Insert Shortcode” button.

Shortcode list can be found on <http://snippi.com/s/1r91f2v>.

# Post Format

---

This theme support support these post format:

- Gallery
- Image
- Video
